IT on your terms

In C&W, we know IT. We understand the IT world is not only hardware and software, nor is it defined as physical or virtual, or "on site" or hosted. There are no absolute truths. However, in C&W, we know the best solution is that which adapts to the needs of your business. For this reason, we have developed a set of services and solutions for you so you can create the appropriate IT infrastructure to implement your projects... on your terms!
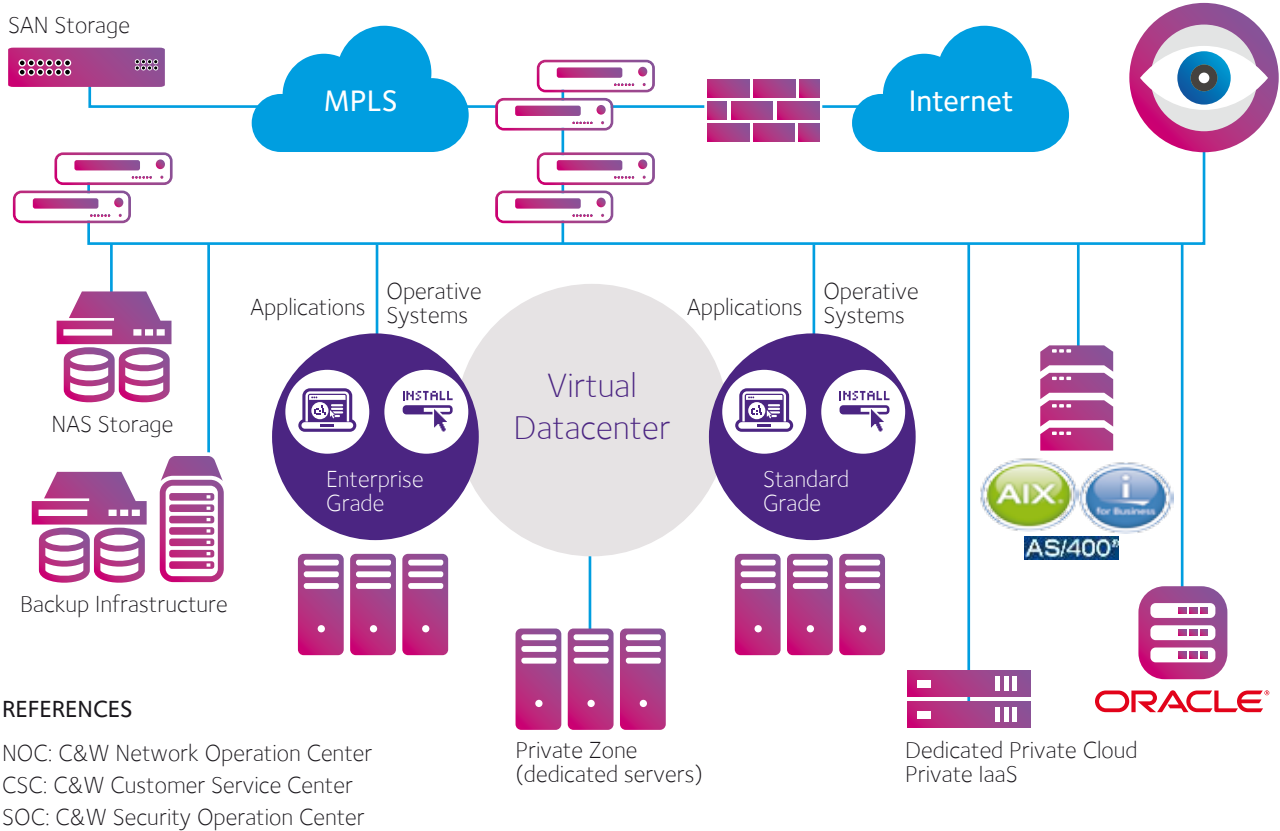

Our services are deployed through a set of solutions which include a datacenter, networking, hardware, software, automation and management tools, and state-of-the-art processes and procedures. All of this is supported by specialized human resources that allow us to provide a comprehensive service with the best standards on the market.

We provide support 24/7, 365 days a year. Our End-to-End solutions cover all main service layers (connectivity, datacenter, hardware, operating systems, and databases) and provide flexible architectures with predictable and affordable costs. All problems can be solved by a call to the specialists that will take care of your IT and communications issues quickly.

Our commitment to you

We will always utilize top-quality IT equipment and software. We will maintain our team of experts and always be willing to provide you with the best possible support. No matter which your objectives are, C&W is your technology ally:

- Renew your IT infrastructure. Are your servers outdated? Do they need an upgrade? Talk to C&W. Let us help you find an innovative way to add capacity, manage your infrastructure, reduce the downtime caused by failures, and improve performance.

- Do you need to enable your IT to support the innovation of your business? With the flexibility we provide to create your IT infrastructure on your terms, you will be able to free up key IT resources to work with your business partners to develop creative business models, distribution channels, products, marketing campaigns, and much more.

- We ensure:
  - Greater security. We have a SOC to monitor the infrastructure 24/7.
  - Greater flexibility. Supporting multiple platforms and multiple delivery models allows you to choose the way you want your infrastructure to be implemented.
  - Greater responsibility. Our NOC is willing to provide you with support 24/7.
