

C&W Virtual Datacenter

Our VDC is a unique solution that allows you to replicate a physical datacenter in a virtual environment.

You don't need any more physical space, dedicated hardware, software and skilled people to manage all your infrastructure. But you still have your "own" datacenter in a virtualized environment.

That's a truly plug and play solution. So much that we challenge you to try our solution at any moment and get your own perception about it.

Flexibility

You define your VDC capacity (CPU, RAM, Storage) and you can change its size at anytime. Capacity can be allocated at user or department level as well.

Self-Service Portal

You also have the option of a managed VDC – Your Virtual Data Center, in your terms and fully managed by C&W. A truly unique C&W service.

Predictability and Lower Risk

No commitment month-to-month contract. Reduce your risk, increase your predictability and adjust the capacity to your current needs.

Multiple Datacenters

Your VDC can span over our different datacenters allowing you more flexibility in order to deploy the load close to your office locations as well as allowing you to create redundancy schemas when needed.

Advanced Networking and Security Features

Firewall and Load balancing services, VPN access, Console access, VLAN and VPC networks, Port-forwarding and optionally you can connect your environment to a dedicated MPLS.

Unlimited Data Transfer

You can transfer unlimited data to and from your virtual data center using C&W leading network in the region. Unmatched by any other service provider.

Multiple OS

Built-in templates on several operational systems. Additionally you can bring your own template or ISO.

Your Choice of VMs

Create as many VMs as you want and with the configuration that is appropriate for you using the resources allocated for your VDC without any extra charge.

Trial** immediately!

C&W VDC solution is offered in two grades: **Enterprise** and **Standard** grade.

Use **Enterprise grade** for your production environment and performance sensitive applications. Use **Standard grade** for less sensitive loads such as development servers, tests environments and temporary loads.

	VDC Category	vCPU Count	RAM (GB)	Primary Storage (GB)	Secondary Storage (GB)	VLAN Network Count	Public IP Count	MRR (\$)
Small	Enterprise	20	50	1000	500	2	4	\$1,617.50
Medium	Enterprise	40	100	3000	1500	3	6	\$3,303.87
Large	Enterprise	80	200	5000	2500	4	8	\$6,064.20
Super	Enterprise	200	500	10000	5000	5	10	\$14,196.46

Remarks

- Includes unlimited internet data transfer to and from the VDC.
- Prices above are for self-managed VDC.
- Clients are to use secondary storage in order to take snapshots from VM. Regular backup can be provided optionally.
- Other configurations can be provided. Ask your commercial representative for a customized quote if needed.
